Postal and Telecommunications buildings, including fit out work, telephone exchanges, workshops and vehicle depots. Major work 13-storey office fit-out Telecom Head Office.

I have an commitment to using environmental sensible building techniques and processes, including design and construction of my own home, and the planning of our bach at St Arnaud as well as the design a large rammed earth house in Tasman

I am a person who enjoys the work that I do and thrive on interaction with other design professionals, and firmly believe the considered interaction of Architecture, Structure, and Site can create successful integrated environments.

I have a strong belief in not only providing what the client needs, but ensuring that the effects on the users, environment and the community be carefully considered. These attributes are assisted with a personal awareness of energy efficient and sustainable design and a desire to keep learning.

I enjoy the outdoors and sharing as much time as possible with my family, while working on our new bach at St Arnaud.
